Context-Free Grammars

- ◆ *Formal definition*
- ◆ *Construction*
- ◆ *Parse tree*
- ◆ *Simplification*

English Grammar

$\langle \text{sentence} \rangle \rightarrow \langle \text{noun_phrase} \rangle \langle \text{predicate} \rangle$

$\langle \text{noun_phrase} \rangle \rightarrow \langle \text{article} \rangle \langle \text{noun} \rangle$

$\langle \text{predicate} \rangle \rightarrow \langle \text{verb} \rangle$

$\langle \text{article} \rangle \rightarrow \langle \text{a} \rangle \mid \langle \text{an} \rangle \mid \langle \text{the} \rangle$

$\langle \text{noun} \rangle \rightarrow \langle \text{boy} \rangle \mid \langle \text{dog} \rangle$

$\langle \text{verb} \rangle \rightarrow \langle \text{runs} \rangle \mid \langle \text{walks} \rangle$

a boy runs

a dog walks

Palindrome Language

$$L = \{ w \mid w \in \{0,1\}^* \text{ and } w = w^R \}$$

◆ recursive definition

- *basis* $\varepsilon, 0, 1$ are palindromes.
- *induction* If w is a palindrome, so is $0w0$ and $1w1$.

Palindrome Language

$$L = \{ w \mid w \in \{0,1\}^* \text{ and } w = w^R \}$$

◆ definition with grammars or rules

1. ε is a palindrome.
2. 0 is a palindrome.
3. 1 is a palindrome.
4. If w is a palindrome, so is $0w0$.
5. If w is a palindrome, so is $1w1$.

Palindrome Language

$$L = \{ w \mid w \in \{0,1\}^* \text{ and } w = w^R \}$$

1. ε is a P .
2. 0 is a P .
3. 1 is a P .
4. If w is a P , so is $0w0$.
5. If w is a P , so is $1w1$.

Context-Free Grammar

A grammar $G=(V, T, S, P)$ is said to be context-free if all productions in P have the form

$$A \rightarrow \alpha, \text{ where } A \in V, \alpha \in (V \cup T)^*$$

CFG for Palindrome Language

$$L = \{ w \mid w \in \{0,1\}^* \text{ and } w = w^R \}$$

CFG for palindromes on $\{0,1\}$

$R = (\{S\}, \{0,1\}, S, P)$, P is defined as follow

$$S \rightarrow \varepsilon, S \rightarrow 0, S \rightarrow 1, S \rightarrow 0S0, S \rightarrow 1S1$$

Compact notation

$$S \rightarrow \varepsilon \mid 0 \mid 1 \mid 0S0 \mid 1S1$$

Example 1 CFG for

$$L = \{ 0^n 1^n \mid n \geq 0 \}$$

$R = (\{S\}, \{0,1\}, P, S)$, P is defined as follow

$$S \rightarrow \varepsilon \mid 0S1$$

ε

0 1

0 0 1 1

0 0 0 1 1 1

0 0 0 0 1 1 1 1

Example 2 CFG for

$$L = \{ 0^n 1^m \mid n \neq m \}$$

$$R = (\{S, A, B, C\}, \{0, 1\}, P, S)$$

$$S \rightarrow AC \mid CB, \quad C \rightarrow 0C1 \mid \varepsilon$$

$$A \rightarrow A0 \mid 0, \quad B \rightarrow 1B \mid 1$$

$$n \neq m \Rightarrow \begin{cases} n > m \Rightarrow n = (n - m) + m \\ n < m \Rightarrow m = n + (m - n) \end{cases}$$

Example 3 CFG for

$L = \{ w \in \{0,1\}^* \mid w \text{ contains same number of 0's and 1's} \}$

$R = (\{S\}, \{0,1\}, P, S)$, P is defined as follow

$S \rightarrow \varepsilon \mid 0S1 \mid 1S0 \mid SS$

Example 4 CFG for

$$L = \{w \in \{0,1\}^* \mid n_0(w) = n_1(w) \text{ and } n_0(v) \geq n_1(v) \\ \text{where } v \text{ is any prefix of } w \}$$

$R = (\{S\}, \{0,1\}, P, S)$, P is defined as follow

$$S \rightarrow \varepsilon \mid 0S1 \mid SS$$

Example 5 CFG for

$$L = \{a^{2n}b^m \mid n \geq 0, m \geq 0\}$$

$R = (\{S, A, B\}, \{a, b\}, P, S)$, P is defined as follow

$$S \rightarrow AB, A \rightarrow \varepsilon \mid aaA, B \rightarrow \varepsilon \mid Bb$$

Derivations

$$L = \{a^{2n}b^m \mid n \geq 0, m \geq 0\}$$

$$S \rightarrow AB, A \rightarrow \varepsilon \mid aaA, B \rightarrow \varepsilon \mid Bb$$

for $w = aabb$:

$$S \Rightarrow AB \Rightarrow aaAB \Rightarrow aaABb \Rightarrow aaBb \Rightarrow aaBbb \Rightarrow aabb$$

Context-Free Language

Let $G = (V, T, S, P)$ be context-free, then

$$L(G) = \{w \mid w \in T^* \text{ and } S \xRightarrow{*} w\}$$

Left Most Derivations

$$L = \{a^{2n}b^m \mid n \geq 0, m \geq 0\}$$

$$S \rightarrow AB, A \rightarrow \varepsilon \mid aaA, B \rightarrow \varepsilon \mid Bb$$

for $w = aabb$:

$$S \Rightarrow AB \Rightarrow aaAB \Rightarrow aaABb \Rightarrow aaBb \Rightarrow aaBbb \Rightarrow aabb$$

Left most :

$$S \Rightarrow AB \Rightarrow aaAB \Rightarrow aaB \Rightarrow aaBb \Rightarrow aaBbb \Rightarrow aabb$$

Right most :

$$S \Rightarrow AB \Rightarrow ABb \Rightarrow ABbb \Rightarrow Abb \Rightarrow aaAbb \Rightarrow aabb$$

Parse Tree

Let $G = (V, T, S, P)$ be a CFG. A tree is a parse tree for G if :

1. Each interior node is labeled by a variable in V
2. Each leaf is labeled by a symbol in $T \cup \{\varepsilon\}$. Any ε -labeled leaf is the only child of its parent.
3. If an interior node is labeled A , and its children (from left to right) labeled x_1, x_2, \dots, x_k ,

Then $A \rightarrow x_1, x_2, \dots, x_k \in P$.

Example 6

$$L = \{ w \mid w \in \{0,1\}^* \text{ and } w = w^R \}$$

$$S \rightarrow \varepsilon \mid 0 \mid 1 \mid 0S0 \mid 1S1$$

Ambiguity

$$G = (\{E, I\}, \{a, b, (,), +, *\}, E, P)$$

$$E \rightarrow I \mid E + E \mid E * E \mid (E), \quad I \rightarrow a \mid b$$

Derivation for $w = a + a * a$:

$$E \Rightarrow E * E \Rightarrow E + E * E \Rightarrow I + E * E \Rightarrow a + E * E \xRightarrow{*} a + a * a$$

$$E \Rightarrow E + E \Rightarrow I + E \Rightarrow a + E \Rightarrow a + E * E \xRightarrow{*} a + a * a$$

Ambiguity

parse-tree for $w = a + a * a$:

Removing Ambiguity

$$E \rightarrow I \mid E + E \mid E * E \mid (E), \quad I \rightarrow a \mid b$$

$$E \rightarrow T \mid E + T, \quad T \rightarrow F \mid T * F, \quad F \rightarrow I \mid (E), \quad I \rightarrow a \mid b \mid Ia \mid Ib$$

Left most derivation for $w = a + a * a$:

$$\begin{aligned} E &\Rightarrow E + T \Rightarrow T + T \Rightarrow F + T \Rightarrow I + T \Rightarrow a + T \Rightarrow a + T * F \\ &\Rightarrow a + F * F \Rightarrow a + I * F \Rightarrow a + a * F \Rightarrow a + a * I \Rightarrow a + a * a \end{aligned}$$

$$E \Rightarrow T \Rightarrow T * T \Rightarrow (E) * T \Rightarrow (E + T) * T \stackrel{*}{\Rightarrow} (a + a) * a$$

Inherent Ambiguity

- ◆ What is inherent ambiguity

A CFL L is said to be *inherently ambiguous* if all grammars that generate it is ambiguous.

Example 7

Let $L = \{ w \mid w \in \{0,1\}^* \text{ and } n_0(w) = n_1(w) \}$

L is not inherently ambiguous, because there is an unambiguous CFG :

$$S \rightarrow \varepsilon \mid 0S1 \mid 1S0 \mid 0S11S0 \mid 1S00S1$$
$$S \rightarrow \varepsilon \mid 0S1 \mid 1S0 \mid SS$$

ambiguity

Example 8

$$L = \{a^n b^n c^m d^m \mid n \geq 1, m \geq 1\} \cup \{a^n b^m c^m d^n \mid n \geq 1, m \geq 1\}$$

The CFG for L is :

$$\begin{aligned} S &\rightarrow AB \mid C, & A &\rightarrow aAb \mid ab, & B &\rightarrow cBd \mid cd \\ & & C &\rightarrow aCd \mid aDd, & D &\rightarrow bDc \mid bc \end{aligned}$$

Let $w = abcd$, there are two left most derivations

$$S \Rightarrow AB \Rightarrow abB \Rightarrow abcd$$

$$S \Rightarrow C \Rightarrow aDd \Rightarrow abcd$$

Simplification of CFG

Why & what :

$S \rightarrow A \mid B, A \rightarrow 1CA \mid 1DE \mid \varepsilon, B \rightarrow 1CB \mid 1DF,$
 $C \rightarrow 1CC \mid 1DG \mid 0G, D \rightarrow 1CD \mid 1DH \mid 0H,$
 $E \rightarrow 0A, F \rightarrow 0B, G \rightarrow \phi, H \rightarrow 1$

- ◆ ε -productions
- ◆ unit productions
- ◆ useless symbols and productions

ε -productions

Variable A is said to be **nullable** if $A \xRightarrow{*} \varepsilon$.

Let $G=(V,T,P,S)$ is a CFG

If $A \rightarrow \varepsilon \in P$, then A is nullable.

If $A \rightarrow A_1 A_2 \dots A_k \in P$, and $A_i \rightarrow \varepsilon \in P$ for $i=1, \dots, k$
then A is nullable.

Example 9 ε -production

$G : S \rightarrow AB, A \rightarrow aAA | \varepsilon, B \rightarrow bBB | \varepsilon$

$$\left. \begin{array}{l} A \rightarrow \varepsilon \Rightarrow A \text{ is nullable.} \\ B \rightarrow \varepsilon \Rightarrow B \text{ is nullable.} \end{array} \right\} S \rightarrow AB \Rightarrow S \text{ is nullable.}$$

Example 10 unit productions

$G : S \rightarrow A|B|0S1, A \rightarrow 0A|0, B \rightarrow 1B|1$

$S \rightarrow 0A|0|1B|1|0S1$

$A \rightarrow 0A|0$

$B \rightarrow 1B|1$

Useless productions

For a grammar $G=(V,T,P,S)$, a symbol X is

usefull, if there is a derivation for some $w \in T^*$

$$S \xRightarrow{*} \alpha X \beta \xRightarrow{*} w$$

generating, if $\alpha X \beta \xRightarrow{*} w$ for some $w \in T^*$

reachable, if $S \xRightarrow{*} \alpha X \beta$ for $\{\alpha, \beta\} \subseteq (V \cup T)^*$

Example 11 Useless productions

$G : S \rightarrow AB|a, A \rightarrow b.$

$S \Rightarrow a$ or

useless

$S \Rightarrow AB \Rightarrow bB \Rightarrow ?$

non-generating

non-reachable

$G : S \rightarrow a, A \rightarrow b.$

$G : S \rightarrow a$

Example 12 Simplify CFG

$S \rightarrow A \mid B, A \rightarrow 1CA \mid 1DE \mid \varepsilon, B \rightarrow 1CB \mid 1DF,$
 $C \rightarrow 1CC \mid 1DG \mid 0G, D \rightarrow 1CD \mid 1DH \mid 0H,$
 $E \rightarrow 0A, F \rightarrow 0B, G \rightarrow \phi, H \rightarrow 1$

- ◆ eliminating ε -productions : $A \rightarrow \varepsilon$

$S \rightarrow A \mid B, A \rightarrow 1CA \mid 1C \mid 1DE, B \rightarrow 1CB \mid 1DF,$
 $C \rightarrow 1CC \mid 1DG \mid 0G, D \rightarrow 1CD \mid 1DH \mid 0H,$
 $E \rightarrow 0A \mid 0, F \rightarrow 0B, G \rightarrow \phi, H \rightarrow 1$

Example 12 Simplify CFG

$S \rightarrow A \mid B$, $A \rightarrow 1CA \mid 1C \mid 1DE$, $B \rightarrow 1CB \mid 1DF$,
 $C \rightarrow 1CC \mid 1DG \mid 0G$, $D \rightarrow 1CD \mid 1DH \mid 0H$,
 $E \rightarrow 0A \mid 0$, $F \rightarrow 0B$, $G \rightarrow \phi$, $H \rightarrow 1$

- ◆ eliminating unit productions : $S \rightarrow A$, $S \rightarrow B$

$S \rightarrow 1CA \mid 1C \mid 1DE \mid 1CB \mid 1DF$,

$A \rightarrow 1CA \mid 1C \mid 1DE$, $B \rightarrow 1CB \mid 1DF$,

$C \rightarrow 1CC \mid 1DG \mid 0G$, $D \rightarrow 1CD \mid 1DH \mid 0H$,

$E \rightarrow 0A \mid 0$, $F \rightarrow 0B$, $G \rightarrow \phi$, $H \rightarrow 1$

Example 12 Simplify CFG

$S \rightarrow 1CA \mid 1C \mid 1DE \mid 1CB \mid 1DF,$

$A \rightarrow 1CA \mid 1C \mid 1DE, B \rightarrow 1CB \mid 1DF,$

$C \rightarrow 1CC \mid 1DG \mid OG, D \rightarrow 1CD \mid 1DH \mid OH,$

$E \rightarrow OA \mid O, F \rightarrow OB, G \rightarrow \phi, H \rightarrow 1$

- ♦ eliminating useless productions

$S \rightarrow 1DE, A \rightarrow 1DE, D \rightarrow 1DH \mid OH, E \rightarrow OA \mid O, H \rightarrow 1$

Chomsky Normal Form

All productions are one of following two forms :

1. $A \rightarrow BC$, $A, B, C \in V$

2. $A \rightarrow a$, $a \in T$

Example 13

Convert following CFG into CNF

$S \rightarrow ABa$, $A \rightarrow aab$, $B \rightarrow Ac$

Greibach Normal Form/GNF

All productions are shown as following form :

$$A \rightarrow ax, \text{ where } a \in T, x \in V^*$$

Example 14

Convert following grammar to GNF

$$S \rightarrow AB, A \rightarrow aA | bB | b, B \rightarrow b$$

Example 15

Convert following grammar to GNF

$$S \rightarrow 01S1 \mid 00$$

Discussion

◆ eliminating ε -productions : $\varepsilon \in L$?

◆ Chomsky normal form

$A \rightarrow a \mid BC$ *advantage ?*

◆ Greibach normal form

$A \rightarrow a\alpha$ *advantage ?*

Good good study
day day up!

How To Be More Impressive

Unknown

Suppose we want to publish something that is as simple as

$$1 + 1 = 2 \quad (1)$$

This is not very impressive. If we want our article to be accepted by IEEE reviewers, we have to more abstract. So, we could complicate the left hand side of the expression by using

$$\ln(e) = 1 \quad \text{and} \quad \sin^2 x + \cos^2 x = 1$$

and the right hand side can be stated as

$$2 = \sum_{n=0}^{\infty} \frac{1}{2^n}.$$

Therefore, Equation (1) can be expressed more scientifically as:

$$\ln(e) + (\sin^2 x + \cos^2 x) = \sum_{n=0}^{\infty} \frac{1}{2^n} \quad (2)$$

which is far more impressive. However, we should not stop here. The expression can be further complicated by using

$$e = \lim_{z \rightarrow \infty} \left(1 + \frac{1}{z}\right)^z \quad \text{and} \quad 1 = \cosh(y) \sqrt{1 - \tanh^2 y}.$$

Equation (2) may therefore be written as

$$\ln \left[\lim_{z \rightarrow \infty} \left(1 + \frac{1}{z}\right)^z \right] + (\sin^2 x + \cos^2 x) = \sum_{n=0}^{\infty} \frac{\cosh(y) \sqrt{1 - \tanh^2 y}}{2^n} \quad (3)$$

Note: Other methods of a similar nature could also be used to enhance our prestige, once we grasp the underlying principles.
